E-LEARNING ACTIVITY

Drop your Assumptions and Pick Up the Evidence: Strategies for Communication with Parents about Vaccines

LEARNING OBJECTIVES:

- List three characteristics of vaccine-hesitant parents.
- Describe the importance of provider-parent communication on parental vaccine decision-making.
- Identify communication strategies that address the concerns of vaccine hesitant parents.

PRESENTED BY

Douglas, J. Opel, MD, MPH
Associate Professor, Department of Pediatrics
University of Washington School of Medicine

ABOUT THIS E-LEARNING COURSE

Most parents in the U.S. vaccinate their children, but there is more work to be done to meet the Healthy People 2020 goals of 80 percent. Recent data suggests that vaccine hesitancy is a growing problem, specifically the number of parents who are opting their child out of required school entry immunizations for non-medical reasons. In Washington, around 4 percent of parents exempt their child.

Register today to learn about vaccine hesitancy and how health care providers can better communicate with parents who have concerns about vaccines.

COURSE DETAILS & AUDIENCE

This course is 1 hour in length, and is designed for physicians, physician assistants, advanced registered nurse practitioners, registered nurses, licensed practical nurses, and medical assistants.
